

## Enquiry Registration

With Enquiry registration (sometimes called wrap-up codes), your agents can document what each call/chat/email was about, for statistics purposes and for the Archive.

Agents usually do the Enquiry registration while in status wrap-up, but it can be done while connected or even after wrap-up has ended.

The Enquiry Registration Categories and Topics the agents can see are defined on page *Users - Enquiry Registrations*.

Category	Topics	Type
Support	Add users Change profiles Login problems Change soundfiles Archive issues	<input type="radio"/> Single choice <input checked="" type="radio"/> Multiple choice <input type="radio"/> Reserved for Dialler
Product	General Admin Application Agent Application Mobile App SMS survey	<input type="radio"/> Single choice <input checked="" type="radio"/> Multiple choice <input type="radio"/> Reserved for Dialler
Finance	Wrong amount Delayed payment Wrong deadline Wrong organisation number Others	<input checked="" type="radio"/> Single choice <input type="radio"/> Multiple choice <input type="radio"/> Reserved for Dialler
General Dialer options	Not interested Interested Wrong number	<input type="radio"/> Single choice <input type="radio"/> Multiple choice <input checked="" type="radio"/> Reserved for Dialler

Categories represent the main themes that your requests can be categorised in, while topics represent the sub themes for each category. You create new topics by clicking the + sign within the Category.

**In the agent application, the categories and topics appear in the order they are shown here on the configuration page.**

- If you want to change the order of categories, just **drag and drop** the categories up/down, or use the move up/down arrows to the right, and then click *Save changes*.
- If you want to change the order of the topics within a category, just **drag and drop** the topics up/down, and then click *Save changes*.

In the *Type* column on the right, you can choose if it should be possible to mark one topic (*Single choice*) or more topics (*Multiple choice*) in this category, or if the Category is *Reserved for Dialler*.

If you want a **free text comment field** in the Enquiry registration part of agents, the [Agent application property Enquiry registration - Allow Comment](#) must be turned ON.

Your agents will receive a new enquiry registration form each time they accept a new request in the Agent application (if configured).

We do not recommend having Enquiry registration in a separate tab, that is, not linked to requests, since such registrations are not shown in the Archive, nor in the historical statistical reports *Enquiry registrations per queue*, *Enquiry registrations per agent* and *Enquiry Registration Comments*.

**All the categories marked as 'Default' will be shown for all your agents unless you configure when to use the**

### different categories:

- If you would like agents in **different User groups** to see different categories (not depending on queue the request came from), you can create [Resource filters](#) containing Enquiry registration categories and assign filters to user groups.
- If you would like to present different Enquiry registration Categories for agents **depending on the queue** the request came from (not depending on the agent's User group), you can define which categories to show per queue. This is done on page Services - Queues under [System Queue settings](#). The standard solution is that all 'Default' categories are shown for all queues.

We recommend including Enquiry registration categories in resource filters (all should be 'Default') **OR** to configure categories per queue, since if you do both, it might be complex and difficult to get a good overview.

If you have the **Dialler** functionality, you can create one or more Categories and set them as *Reserved for Dialler*. For each Dialler campaign you can choose one Category (Reserved for Dialler) that should be used. A Category Reserved for Dialler will only be shown in the Agent application when an agent receives a call from a Dialler campaign queue that has chosen this Category. When an agent receives a call from a Dialler queue, we present the Category selected for this Dialler Campaign queue (if any) and the categories selected for this system queue (None, All default or a selection). More info [here](#).

The results of the enquiry registrations can be seen in the **Archive**, in Raw data and in **4 statistics reports**: *Enquiry registrations*, *Enquiry registrations per queue*, *Enquiry registrations per agent* and *Enquiry registration comments*. A registration not linked to a request will only be included in the first report.

"Forced Enquiry registration" is described [here](#), and the agent application user guide article is [here](#).
