

## Variables in Archive

If it's configured that your solution stores the value for a specific variable in the call's raw data, this variable is searchable and visible in the Archive. Example: If the solution behalf of the caller does an external look-up in your CRM system with the caller's number as parameter, and your CRM system returns the customer number or a case id, this returned value can be stored in a variable.

If a variable is configured, you can choose the Variable name in the search list box and optionally enter a string (with \* as wildcard) as Value and search. In the result part, a call that has a variable value will have a new tab called Variables where the call's variable(s) and belonging value(s) are shown.

The screenshot displays the Puzzel Archive interface. At the top, there is a header bar with call details: 29.01.2020 12:39, 21492985 (Predi..., 0:09, 0:09, 99261, and 0:18 Pat. Below the header, there are several tabs: General Information, Recording, Enquiry Registration, and Variables. The 'Variables' tab is highlighted with a red box. Below the tabs, there is a table with the following structure:

Time	Variable Name	Variable Value
29.01.2020 12:40:00		
29.01.2020 12:40:00		
29.01.2020 12:40:00		
29.01.2020 12:40:00
