

## Creating Logic App for Office 365

This section describes the process of creating a resource template in Azure that defines the resources you will need to deploy for your solution. To create a template:

1. Click on the Hamburger sign on the top left corner and select **Create a resource** or select **Create a resource** icon in the **Home** page.

2. Create a new resource template of type Template deployment (deploy using custom templates)

3. Click on **Create**

Home > New >

## Template deployment (deploy using custom templates)

**Overview** Plans

Applications running in Microsoft Azure usually rely on a combination of resources, like databases, servers, and web apps. Azure Resource Manager templates enable you to deploy and manage these resources as a group, using a JSON description of the resources and their deployment settings.

Edit your template with IntelliSense and deploy it to a new or existing resource group.

By clicking "Purchase," I (a) agree to the applicable legal terms associated with the offering; (b) authorize Microsoft to charge or bill my current payment method for the fees associated the offering(s), including applicable taxes, with the same billing frequency as my Azure subscription, until I discontinue use of the offering(s); and (c) agree that, if the deployment involves 3rd party offerings, Microsoft may share my contact information and other details of such

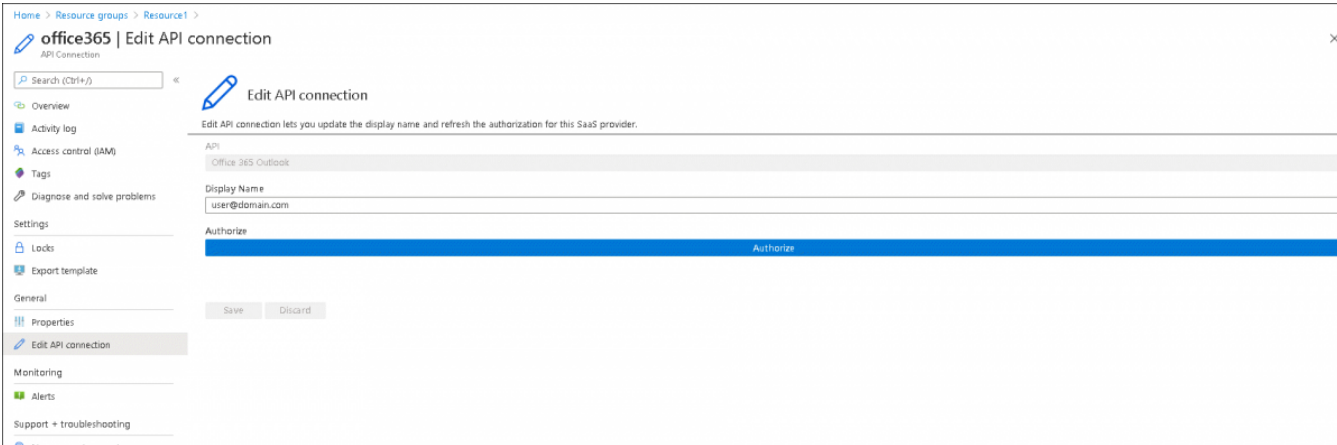

Purchase

7. Select Resource groups icon from the Home screen choose your Resource group and click on Office365

Parameter	Value
Client ID	This value can be found at the end of the Application Registration process in section 2.1
Secret	The secret value for Puzzel Office 365 Connector app created in section 3
Tenant ID	This value can be found at the end of the Application Registration process in section 2.1
Email	The email address from which the messages will be triggered
Puzzel Customer Key	Customer number of your Puzzel solution
Puzzel Password	Password to your Puzzel solution
Puzzel User	Username to your Puzzel solution
Puzzel Access Point	Email id configured as Access point in Puzzel
On Error Email	Email id to which notifications will be sent in case of an error. This email address must be different to the one that triggers the messages.

7. 

8. Select Edit API connection from the left menu and click on **Authorize**. In the sign-in popup screen, login with the email credentials from which the messages must be triggered

- 9. Save the changes
- 10. Navigate to the **Resource groups** and select the resource group you created. Click on the **PuzzleConnectorEmailTriggered** option and **Enable** it
