

Supervisor Dashboard

What is Supervisor Dashboard?

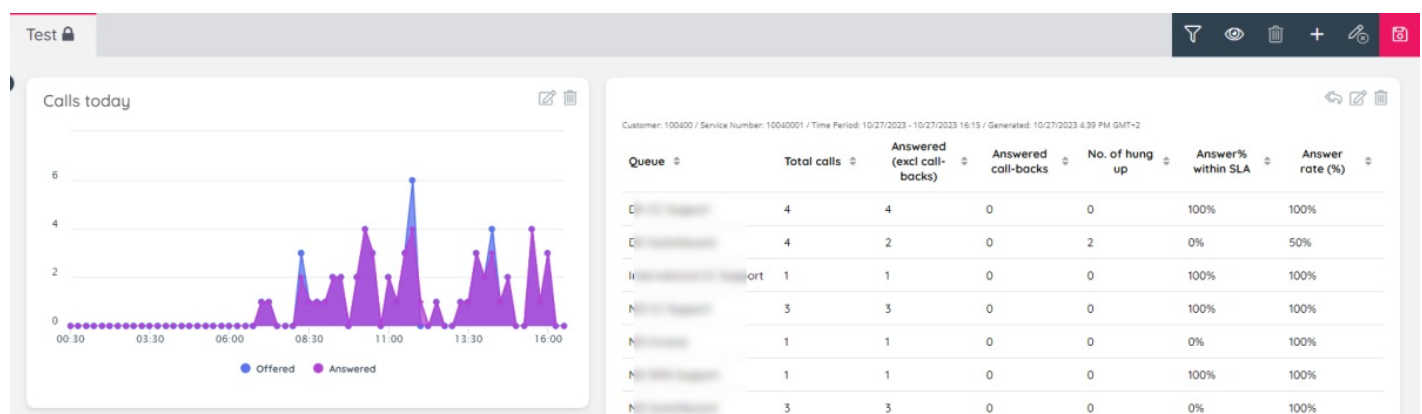

The Supervisor Dashboard is a customisable visualisation tool for showing:

- **Real-time** data on **Queue** level and **Agent** level
- **Historical statistics reports**, typically for yesterday or so far today

Each user with access to the Dashboard page...

- can create *Private* and *Company* Dashboards
- has access to other users' *Company* Dashboards
- can decide which of his own and which of other users' *Company* Dashboards to see as tabs on the Dashboard page.
Please see [Choose visible Dashboards](#)

Each Dashboard consists of 1 or more **widgets** with data, and the data can be shown in **atable** or as a **chart**.

The Dashboard is fully configurable and allows full control over the location, size, style and data in each widget on a Dashboard.

If not all users should have access to all defined *Company* Dashboards, [resource filters](#) containing one or more Dashboards can be created and assigned to different user groups.

If you (as one of the main admins) want to give some users a read-only access to existing *Company* Dashboards to prevent them from creating *Private* or *Company* Dashboards, please go to page *Users – Access control – Administration* and turn on property *Limit Dashboard access to Read-only* for the relevant user groups/users. A user with such read-only access can only select which Dashboards to see among the existing *Company* Dashboards created by other users.

For one or more of your *Company* Dashboards, you can turn on 'Allow others to edit', and if done, only users with the [Administration property Edit other users' public Dashboard](#) turned ON can edit the Dashboard in addition to the Dashboard creator/owner.

By default, all 'admin' users (=users with *Edit my own company* turned ON) have access to the Dashboard page in Admin Portal. If some admin user should not see it, please turn OFF the [Admin Portal menu property Enable menu Dashboard](#) on page *Users -> Products* for these users/user groups.

Please see more details in the next articles.
