

## Click to call

Click to call is commonly implemented in CRM systems so that it is possible to just click on a contacts phone number to call out.

### Auth sample Uri:

```
https://api.intele.com:443/Connect/ContactCentre5/auth/credentials?userName=customerkey%5Cusername&password=password
```

Replace customerkey, username and password with real values from your solution.

No Special headers are required for this webservice call.

This gives me a "200 OK" from the server and the following response JSON.

### Sample Auth response:

```
"result": "csid!1000971DDDF34BA8204CCAA8822BC2F6BF79A9",  
"code": 0
```

Code 0 means that the operation was successful and the content of "result" is the access token I need to pass when using other operations in the API.

### Get user ID of current user:

```
https://api.intele.com:443/Connect/ContactCentre5/accesstokeninformation?accessToken=csid!1000905E6CAF7BF23483F85240018D60F9FB6
```

```
{  
  "result": {  
    "customerid": 11408,  
    "userGroupid": 20989,  
    "userid": 150805,  
    "languageid": 1,  
    "languageCode": "EN",  
    "accessTokenExpiry": "/Date(1452109966580-0000)"/  
  },  
  "code": 0  
}
```

### Check state of current user

```
https://api.intele.com:443/Connect/ContactCentre5/10009/users/150805?  
accessToken=csid!1000905E6CAF7BF23483F85240018D60F9FB6&withQualities=false
```

```

As we can see the user is "LoggedOn" and "Available". Now we can order the callout itself.
