

Statistics

Under Statistics there are 2 sub menus/pages

- **Reports**, where you can generate reports and configure custom reports
- **Report subscriptions**, where you can configure what reports to be sent to whom at what times. See details [here](#).

Reports

A variety of Standard Reports are available, and you can make your own Custom Reports. You can create report categories and put your Custom reports in different categories to get a better overview and to simplify access control.

In the [Statistics section under Feature guide](#), you will find information about different reporting levels, how callback is counted and more.
