

## **Call events and Agent events**

The 2 main tables in Puzzel Contact Centre Raw data arecall\_events and agent\_events.

- The <u>call\_events</u> table contains all events related to routing/queueing of the calls and written requests, whether they are related to agents or not. Examples are call event types are Conversation events, Menu events and Queue events.
- The <u>agent\_events</u> table shows all agent activities (log on/logoff/pause/return). In addition, it shows the Conversation events related to agents. This means that you will find Conversation events related to agents both in the call\_events table and in the agent\_events table.
