

Adding a Facebook Source

To add a **Facebook** Social media source, simply click on the Add Facebook Page button. This triggers the following prompt:

A dialog box titled "Add Source Channel" with a close button (X) in the top right corner. Below the title bar, it says "Please select Facebook or Messenger". There are two radio buttons: "Facebook" (selected) and "Messenger". At the bottom left, there is a "Select" button.

Add Source Channel ?

Please select Facebook or Messenger

☒ Facebook

☐ Messenger

Select

Here, one can select between the following choices:

1. **Facebook** this will add a source, pointing to a Facebook page, which will fetch public messages only
2. **Messenger** this will add a source, pointing to a Facebook private message channel

Adding a Public Facebook Source

Whichever of the two sources you choose to add, you will need to authenticate against the account which owns the messenger or Facebook page. This step looks like this:

A screenshot of a web browser showing a Facebook login and authorization screen. The browser title is "Log in With Facebook - Google Chrome". The address bar shows a secure connection to a Facebook URL. The page has a Facebook logo and the text "Log in With Facebook". Below this, there is a red puzzle piece icon. The text says "DvPuzzel Connector - Public msgs will receive: your name and profile picture and email address." There is a link "Edit This" with a pencil icon. A large blue button says "Continue as Yavor". Below that is a "Cancel" link. At the bottom, there is a lock icon and the text "This doesn't let the app post to Facebook" and a link to "Privacy Policy".

Log in With Facebook - Google Chrome

Secure | https://www.facebook.com/v3.0/dialog/oauth?app_id=177293139577676&a...

Log in With Facebook

DvPuzzel Connector - Public msgs will receive:
your name and profile picture and email address.

[Edit This](#)

Continue as Yavor

Cancel

This doesn't let the app post to Facebook

[Privacy Policy](#)

Once the Facebook account has been authorized, one can configure the source and description. For **apublic** page, one needs to choose the exact page, associated with this account:

Add Source Channel ?

Id	Name	
248399299113703	Puzzel Test Page 1	Connect

In the example above, clicking on the **Connect** button will open the last set of options to configure:

Add Source Channel ?

Select Service81511567

Select QueueSocialCee Facebook

Message typePublic message

Description

Create

This represents a set of configuration settings. The fields that need to be configured are:

1. **Service** this needs to point to the access point, associated with the service
2. **Message type** this dictates the types of message that can be fetched. Private message will fetch only private messages and public will fetch public posts, visible to everyone. This depends on the channel that is chosen Facebook page or Facebook Messenger
3. **Queue** -this specifies the queue, which will be used to channel messages to the agent application
4. **Description** this field allows you to enter a meaningful description for the source.

To finalize the configuration, simply click on the **Create** button. This adds the Source in the list of sources so that it can be further paused, disconnected, removed or modified.

Adding a Private Facebook Source

The other option, when adding a Facebook source, is to choose a private message channel - Messenger:

Add Source Channel ?

Please select Facebook or Messenger

☐ Facebook
☒ Messenger

Select

Once the authorization process is complete, you are prompted to choose the Facebook Page, for which you will be fetching private message. This looks like this:

Add Source Channel ?

Id		Name	
248399299113703		Puzzel Test Page 1	
		<div>Connect</div>	

Once you click on **Connect**, you can configure the last fields, which are the same as the ones for a Public Source channel:

Add Source Channel ?

Select Service	81511569	Select Queue	Facebook
Message type	Private message	Description	

Create

Since this is already a Private message channel, the Message type field is not modifiable. One can proceed to select a Queue for the source and add a corresponding description.
Once all fields are configured, you can click on the Create button, which finalizes the source modification and adds it to the list of available Social Media sources.
