

Manage users with SCIM

For managing and provisioning users the open [System for Cross-domain Identity Management \(SCIM\)](#) API is supported.

SCIM is a REST-based API specified by the Internet Engineering Task Force (IETF) in [RFC7642](#), [RFC7643](#) and [RFC7644](#). The API can be used to create, read, update and delete resources. In addition to managing the user identities, SCIM also have endpoints to discover its schema and other capabilities.
