

agent_event_sources

Table name: **agent_event_sources**

Contains/Role:

- Holds the description for the different possible sources for an agent event.
- Table agent_events holds a foreign key against this table.

Column Name	Datatype	Description
event_source	Char (1) Primary key.	The code for the source. Currently these codes are in use: a – Automatic (logoff at midnight or after x unanswered calls) c – Very old Connect agent desktop clients i – Internal (for event_type c) p – Phone (logon/off from Phone “back-door”) w – Web (Agent application or Admin Portal*) ? – Unknown (should not happen)
descript	Varchar (255)	Describes the code.

* If an agent is logged off/on by an admin using the Admin Portal, this is also shown in the Admin Portal’s change log.
